Specialists in professional home cinema, multi-room audio and home automation

Systems offered:

We ensure that all our installations are **quality managed**, and close attention is made to the choice of equipment through the programming to the final commissioning.

We **pride** ourselves in maintaining a **strong relationship** for support and backup with both you and your system.

- **Home Cinema** - A home cinema could be a simple Plasma/ LCD TV with small satellite speakers to a full dedicated room with Projector/Sound processor and professional speakers.
- **Multi-room** - When you require Music and TV to be available in multiple rooms in a house. This is generally done by housing all of the equipment in a central location. A keypad or remote can then be used to control equipment from within each room.
- **Home Automation** - This generally goes hand in hand with multi-room. Often we are asked if it is possible to control the following from remote or wall keypad:- Electric gates, Plasma Lift, Projector screen, Light dimming, Heating, Door intercom ... basically anything that is controllable can be operated from a single custom designed control system.
- **CCTV** - Sophisticated camera systems can be provided that enable you to monitor your property from another location via the internet over a secure connection. This can also have a built in recording facility so that should the worst happen, the police will be able to interrogate the system and hopefully have evidence to aid a prosecution. This can also be applied to a holiday home which you may have abroad. You can monitor the comings and goings of service staff to ensure all work is carried out as agreed.
- **Computer Network** - We can also add a PC Network into a property whilst wiring for a multi-room

Some of the brand names we supply and support are:

Crestron, Artcoustic,
Lexicon, Primare,
Genelec, B&W, Nordost,
Boston, Speakercraft,
Infocus, Sim2, Runco,
Denon, Pioneer, Imerge,
Aquavision, AudioPro,
Sony, Kaleidescape,
Harman Kardon, Lutron,
Revel, Fujitsu, Stewart,
Middle Atlantic and
Panasonic.

Services provided:

- **Design** - We are able to design custom Multi-room Audio/Video systems, Home Cinema, Home Automation, Computer Networks and CCTV. These designs can be used to provide electricians with the necessary data to cable a new build, ready for a system to be installed.
- **Project Management** - We can work with a site foreman to ensure that the system is installed correctly as per the specifications in the time scales required. This will provide you with peace of mind and reassurance that this part of the project is carried out accurately and to a high standard.
- **Programming** - Many of today's systems are computer orientated, whether it is a simple touch screen remote control or a full blown home automation system. This requires a competent programmer to ensure that the system will work in a logical and user friendly fashion. We can also resolve existing systems that are unreliable due to poor programming.
- **Installation** - With our team of engineers we can successfully install a home cinema or home automation system. All our work is carried out to a very professional standard using high quality materials, taking into account the aesthetics as well as the technical, in order to provide the client with a unobtrusive and reliable system.
- **Commissioning** - An essential part of the installation is the set up and commission. This basically ensures that the system is fully functional and is operating to its maximum capability. Setting up a cinema sound system and projector correctly ensures that you watch and listen to a film as the director intended.
- **Warranty** - Unfortunately nothing can be guaranteed to last a lifetime so we ensure that we provide a service to get your system back up and running as soon as possible.
- **Upgrades** - In the fast moving world of electronics new systems become available. We like to develop a trusting relationship and keep you up to date with any of the latest upgrades.
- **Supply of Equipment** - We are dealers for many professional Audio/Video Brands. This again is just another service that takes away the pressure of trying to source the correct equipment for the job.
